

MCSA

Microsoft Certified Systems Administrator (MCSA) candidates are required to pass three core exams and one elective exam. The MCSA certification trains a student to become an I.T. professionals that implement, manage, and troubleshoot network systems based on the Microsoft Windows and Windows .NET Server platforms. Implementation responsibilities include managing and supporting the network systems.

The need for Network Administrators has increased drastically over the past 10 years and the industry has indicated that a certification for this profession is necessary. The MCSA credential offers network professionals a competitive edge in today's constantly shifting I.T. environment by validating the specific knowledge required for the systems administrator's job role.

With MCSA credentials a student is marketable for Networking Engineer opportunities throughout the world.
